### **INSTRUCTIONS TO CANDIDATE**

Printed Technical And Vocational College Date: 26.11.2025  
02:52 PM

1. The paper consists of **TWO** sections: **A** and **B**.
2. Answer **ALL** questions in section **A** and **ANY THREE (3)** questions in section **B**.  
Date: 26.11.2025 02:52 PM
3. Marks for each question are indicated in the brackets.
4. Candidates are provided with a separate answer booklet.
5. **DO NOT** write on this question paper.

Printed By: Technical And Vocational College

Date: 26.11.2025 02:52 PM

**This paper consists of FIVE (5) printed pages**

**Candidates should check the question paper to ascertain that all pages are  
printed as indicated and that no questions are missing.**

## SECTION A (40 MARKS)

***Answer ALL Questions in this Section***

1. **During a factory**, a supervisor asks a technician to explain the **Carnot cycle**. List the **THREE** thermodynamic processes involved in the cycle that the technician would give (3 Marks)  
Printed By: Technical And Vocational College Date: 26.11.2025 02:52 PM
2. **A mechanical technician preparing for an industrial exhibition** must choose suitable **heat exchangers** to demonstrate. Name **THREE** types of heat exchangers he could have selected based on construction and **design**. (3 Marks)  
Printed By: Technical And Vocational College Date: 26.11.2025 02:52 PM
3. A hospital plans to install a backup power **system**. As a **mechanical technician**, advise the client on **FOUR** advantages of using reciprocating engines. (4 Marks)  
Printed By: Technical And Vocational College Date: 26.11.2025 02:52 PM
4. In a technical discussion on plant design, a senior engineer asks you to clarify thermodynamic concepts. Distinguish between the terms 'system substance' and 'system properties' with workplace relevance (4 Marks)  
Printed By: Technical And Vocational College Date: 26.11.2025 02:52 PM
5. The gasses in a gas turbine flow through the turbine at 18kg/s. The gases have an inlet **enthalpy** of 1200kJ/kg and 360kJ/kg respectively. The inlet and outlet **velocities** are 70m/s and 120m/s respectively. Calculate: (4 Marks)  
Printed By: Technical And Vocational College Date: 26.11.2025 02:52 PM
  - a. Work done if the turbine develops 1400kW
  - b. Amount of heat rejected if the flow is assumed to be steady.  
Printed By: Technical And Vocational College Date: 26.11.2025 02:52 PM
6. During system performance analysis in a **thermal plant**, the engineer emphasizes the importance of equilibrium states. Define the following states of equilibrium as the **engineering**. (3 Marks)  
Printed By: Technical And Vocational College Date: 26.11.2025 02:52 PM
  - a. **Thermal equilibrium**
  - b. **Mechanical Equilibrium**
  - c. **Chemical Equilibrium**  
Printed By: Technical And Vocational College Date: 26.11.2025 02:52 PM
7. As a mechanical intern at a steam turbine plant, you are tasked to train the new recruits. Define the following **cycles** as used in steam turbine plants to the new recruits. (4 Marks)  
Printed By: Technical And Vocational College Date: 26.11.2025 02:52 PM
  - a. **Rankine cycle**  
Printed By: Technical And Vocational College Date: 26.11.2025 02:52 PM
8. Compressors are mechanical devices commonly used in most engineering firms. List **FOUR** types of these devices used in industrial plants. (4 Marks)  
Printed By: Technical And Vocational College Date: 26.11.2025 02:52 PM
9. The concept of entropy is important when evaluating the efficiency of a heat engine. State the reasons for this. (2 Marks)  
Printed By: Technical And Vocational College Date: 26.11.2025 02:52 PM

10. Define the term calorific value of fuels and indicate its SI unit. (4 Marks)
11. In a turbine testing facility, a horizontal nozzle has fluid entering at a velocity of the 50m/s. The nozzle area of  $0.15\text{m}^2$  and the specific volume at the inlet is  $0.165\text{m}^3/\text{Kg}$ . Calculate:
  - a. The mass flow rate (2 Marks)
  - b. The outlet area of the nozzle (3 Marks)

Printed By: Technical And Vocational College

(Take: Specific volume at the nozzle outlet as  $0.525\text{m}^3/\text{Kg}$ )

## SECTION B (60 MARKS)

**Answer any THREE Questions in this Section**

Printed By: And Vocational College

12. In a given industry, a gas turbine unit takes in air at  $17^{\circ}\text{C}$  and 1.01 bar and the pressure ratio is 8/1. The compressor is driven by the High Power (HP) turbine and the Low Power (LP) turbine drives a separate power shaft. The isentropic efficiencies of the compressor and the HP and LP turbines are 0.8, 0.85, and 0.83 respectively. Note that: The maximum cycle temperature is  $650^{\circ}\text{C}$ . For the compression process take  $C_p = 1.005 \text{ kJ/KgK}$ , and  $\gamma = 1.4$ ; for combustion process, and for the expansion process take  $C_p = 1.15 \text{ kJ/KgK}$  and  $\gamma = 1.333$ . neglect the mass of the fuel. The line diagram of the unit cycle (a) and T-S diagram (b) are as shown below:

Printed By: The pressure and temperature of the gases entering the power turbine, (10 Marks)

- the net power developed by the unit per kg/s mas flow rate, (6 Marks)
- the work ratio and the cycle efficiency of the unit. (4 Marks)

13.

Date: 26.11.2025 02:52 PM

a. During boiler maintenance in a factory, it is often necessary to check the composition of flue gases to assess combustion efficiency. With the aid of a diagram, explain how

Printed By: The apparatus used to carry out flue gas analysis (8 Marks)

b. Determine the air fuel ratio of a sample of flue gas if it has the following percentage composition by mass; Coal 85%,  $\text{H}_2$  12.5%,  $\text{O}_2$  2% and the residue 0.5%. The dry fuel has the following by composition by volume;  $\text{CO}_2$  9%, CO 7.77% and  $\text{N}_2$  82.23%. (8 Marks)

Printed By: Technical And Vocational College

Date: 26.11.2025 02:52 PM

c. A single stage reciprocating compressor takes  $1 \text{ m}^3$  of air per minute at 1.013 bar and  $15^\circ\text{C}$  and delivers it at 7bar. Assuming that the law of compression is  $pv^{1.35} = \text{constant}$ , and that clearance is negligible, calculate the indicated power. (4 Marks)

14.

Date: 26.11.2025 02:52 PM

a. An ultimate analysis of a fuel conducted in a power plant gave the following percentage composition: C=70%, H<sub>2</sub>= 5%, O<sub>2</sub>=12%, N<sub>2</sub>=2% and Ash=10%.

Printed By: Technical And Vocational College Date: 26.11.2025 02:52 PM

i. Stoichiometric air fuel ratio.

Printed Technical And Vocational College Date: 26.11.2025  
02:52 PM

ii. Air fuel ratio.

iii. Volumetric analysis of the dry products in (a)(ii) above. (10 Marks)

*Take the atomic masses as C=12, H=1, O=16, N=14*

b. The volumetric analysis of the dry products is approximately 0.42% CO<sub>2</sub> and 99.58% N<sub>2</sub>. A mild steel tank of wall thickness 12 mm contains water at  $95^\circ\text{C}$ . The thermal conductivity of mild steel is 50 W/m°C, and the heat transfer coefficients for the inside and outside the tank are 2850 and 10 W/m<sup>2</sup> °C, respectively. If the atmospheric

Printed By: Technical And Vocational College

temperature is  $15^\circ\text{C}$ , calculate:

i. The rate of heat loss per m<sup>2</sup> of the tank surface area.

ii. The temperature of the outside surface of the tank. (10 Marks)

15.

Heat engine cycle is a sequence of processes where ad undergoes changes

Printed By: Technical And Vocational College Date: 26.11.2025 02:52 PM

in pressure, temperature, and volume, eventually returning to its initial state. You are an industrial mechanical technician designing a heat engine cycle with a hot reservoir at

Printed By: Technical And Vocational College

Date: 26.11.2025 02:52 PM

800 °C and a cold reservoir at  $15^\circ\text{C}$ , calculate the:

i. Thermal efficiency and
